Alexey Lugovskoy

Python backend · Linux & automation

GitHub · Telegram

I study computer systems security at MTUCI, build APIs with Python, and automate recurring tasks on Linux.

Work experience

RUSBITECH Astra

Astra Linux administration

• Set up Astra Linux workstations and servers in VirtualBox. Configured networking, repositories, and system updates.

• Managed accounts and permissions with ACLs and PARSEC. Configured SSH key authentication.

• Wrote Bash scripts for diagnostics and scheduled tasks. Configured Nginx and documented the setup.

Selected projects

Linux Terminal Trainer

A hands-on trainer that checks Linux commands and gives feedback after each exercise.

LLM Translation Workflow

Helped design a team workflow that preserves document structure and validates translated segments.

Flood

Built and deployed a community forum with FastAPI and React.

Education

Moscow Technical University of Communications and Informatics

Computer Systems Security · Expected graduation in 2028

Technical skills

Python, FastAPI, Pydantic, REST API, Bash, Linux, Git, React, Nginx
